Water Supply Outlook For Nevada

SOIL CONSERVATION SERVICE
U.S. DEPARTMENT OF AGRICULTURE

Cooperating with

NEVADA DEPARTMENT of CONSERVATION
AND NATURAL RESOURCES
DIVISION OF WATER RESOURCES

AS OF
Oct. 1, 1983

TO RECIPIENTS OF WATER SUPPLY OUTLOOK REPORTS:

Most of the usable water in western states originates as mountain snowfall. This snowfall accumulates during the winter and spring, several months before the snow melts and appears as streamflow. Since the runoff from precipitation as snow is delayed, estimates of snowmelt runoff can be made well in advance of its occurrence. Streamflow forecasts published in this report are based principally on measurement of the water equivalent of the mountain snowpack.

Forecasts become more accurate as more of the data affecting runoff are measured. All forecasts assume that climatic factors during the remainder of the snow accumulation and melt season will interact with a resultant average effect on runoff. Early season forecasts are therefore subject to a greater change than those made on later dates.

The snow course measurement is obtained by sampling snow depth and water equivalent at surveyed and marked locations in mountain areas. A total of about ten samples are taken at each location. The average of these are reported as snow depth and water equivalent. These measurements are repeated in the same location near the same dates each year.

Snow surveys are made monthly or semi-monthly from January 1 through June 1 in most states. There are about 1900 snow courses in Western United States and in the Columbia Basin in British Columbia. Networks of automatic snow water equivalent and related data sensing devices, along with radio telemetry are expanding and will provide a continuous record of snow water and other parameters at key locations.

Detailed data on snow course and soil moisture measurements are presented in state and local reports. Other data on reservoir storage, summaries of precipitation, current streamflow, and soil moisture conditions at valley elevations are also included. The report for Western United States presents a broad picture of water supply outlook conditions, including selected streamflow forecasts, summary of snow accumulation to date, and storage in larger reservoirs.

Snow survey and soil moisture data for the period of record are published by the Soil Conservation Service by states about every five years. Data for the current year is summarized in a West-wide basic data summary and published about October 1 of each year.

Published by Soil Conservation Service

The Soil Conservation Service publishes reports following the principal snow survey dates from January 1 through June 1 in cooperation with state water administrators, agricultural experiment stations and others. Copies of the reports for Western United States and all state reports may be obtained from Soil Conservation Service, West Technical Service Center, Room 510, 511 N.W. Broadway; Portland, Oregon 97209.

Copies of state and local reports may also be obtained from state offices of the Soil Conservation Service in the following states:

WATER SUPPLY OUTLOOK FOR NEVADA

The 1983 water year will be remembered as the Big Snow Year. It began with almost no fall season, continued into an extended winter, with a short spring and summer season.

The snow pack began accumulating early with the first snow on Mt. Rose in mid-September. Mt. Rose Ski Area was open for skiing on Nevada Day, October 31. Many ski areas were open for Thanksgiving. Skiing continued at Alpine Meadows through July 4. Melting did not begin until mid-May at the upper elevations--a delay of almost two months. The storms of 1983 were frequent and record snow depths and water contents ranged from 200 to 250 percent of average.

Streamflows remained above average for the year, with peak flow dates delayed approximately two months. Reports by the USGS indicate that many Nevada streams have been above average for the past 14 months. During the April-July period, streamflows in the Sierra were approximately 250% of average, while the Humboldt was near 275% of average. Snowmelt runoff caused considerable damage to roads, and serious gully erosion occurred on the rangelands across the state. Saturated soil conditions and avalanches caused many landslides throughout the northern part of the state. Runoff during the season caused excess water in the Humboldt Sink flooding adjacent farmland. Lahontan Reservoir filled with water going over the spillway causing flooding conditions downstream from the reservoir.

The seven major reservoirs used for irrigation in Nevada now contain 1,196,000 acre-feet of water as compared to 1,172,000 acre-feet in October 1982. This year's total is 152% of average for this time of year. Lake Tahoe's elevation is 6,228.3 feet above sea level as compared to last year's 6228.41 feet.

A comparison is shown for the Tahoe-Truckee Basins for the past nine years.

TAHOE-TRUCKEE BASIN

Year	Percent Snow Water as of April 1	Truckee River at Farad April 1-July 31 (1,000 acre-feet)	Lake Tahoe Stage Rise in Feet* April 1 to High Elev.	Reservoir Storage** (1,000 acre-feet) April 1 October 1
1983	207	712	3.52	799 876
1982	149	409	2.38	783 901
1981	60	95	.54	553 295

1979	87	177	1.13	237 215
1978	128	318	1.37	188 253
1977	33	51	.31	208 42
1976	47	59	.21	668 398
1975	158	367	1.92	756 785
1963-77 Average	100	273	1.42	653*** 626***

* One foot of rise equals approximately 120,000 acre-feet.

** Total of useable storage in Lake Tahoe, Boca, Stampede and Prosser Reservoirs.

*** Stampede and Prosser Reservoirs have 7 and 14-year averages, respectively, included in this total.

Lake Tahoe useable storage is between the elevations of 6,223.0 and 6,229.1 feet. The October 1 level was 6228.3 feet. The high elevations attained each year since 1975 are:

July 8, 1983 - 6,228.95 feet
 June 24, 1982 - 6,228.98 feet
 June 8, 1981 - 6,226.53 feet
 July 20, 1980 - 6,227.32 feet
 June 11, 1979 - 6,225.15 feet
 June 11, 1978 - 6,225.20 feet
 June 11, 1977 - 6,224.22 feet
 May 23, 1976 - 6,227.04 feet
 July 16, 1975 - 6,228.60 feet

APRIL - JULY 1983
NEVADA STREAMFLOW FORECASTS
AND
OBSERVED STREAMFLOW

The following table contains April-July forecasts made during the past winter. Observed streamflow quantities are provisional as furnished by the U.S. Geological Survey.

AGENCIES COOPERATING IN COLLECTING DATA CONTAINED IN THIS BULLETIN

FEDERAL

Agricultural Research Service
Bureau of Reclamation
Fish and Wildlife Service
Forest Service
Geological Survey
Soil Conservation Service
U. S. District Court - Federal Water Master
NOAA, National Weather Service

STATE

California Cooperative Snow Surveys
California Department of Parks and Recreation
California Department of Water Resources
Colorado River Commission of Nevada
Idaho Cooperative Snow Surveys
Nevada Association of Conservation Districts
Nevada Department of Conservation & Natural Resources
Division of Water Resources
Nevada State Forester
Oregon Cooperative Snow Surveys
University of Nevada, Desert Research Institute
Utah Cooperative Snow Surveys
White Mountain Research Station, Univ. of California

PRIVATE

Amalgamated Sugar Company
Kennecott Copper Corporation
Nevada Irrigation District
Owyhee Project North Board of Control
Owyhee Project South Board of Control
Pacific Gas and Electric Company
Pershing County Water Conservation District
Sierra Pacific Power Company
Truckee - Carson Irrigation District
Walker River Irrigation District
Washoe County Water Conservancy District

Other organizations and individuals furnish valuable information for the snow survey reports. Their cooperation is gratefully acknowledged.
